

## Light Commando Mortar LMC

60 mm Light Commando Mortar is designed for destructive kinetic impact against enemy combat systems and to destroy manpower, light field fortifications as well as firearms and military technology with semi-indirect fire. Due to the high range and high fragmentation of the projectile, the mortar provides effective support to the fighting units under different optical visibility and atmospheric conditions both during the day and at night. The steep trajectory of the missile and the small dimensions of the mortar in the combat position allow the targets to be struck by semi-indirect fire, i.e. observed from the firing position.

LMC manufactured by ZM Tarnów S.A. is the only mortar on the market that allows to fire projectiles up to 2.2 kg while ensuring the guaranteed durability of the barrel at the level of 2000 shots.

The LMC mortar is designed to fire 60 mm MAPAM (Mortar Anti-Personal Anti-Material) ammunition with a propellant charge I (Charge 1) by SAAB Bofors Dynamics. The LMC mortar is equipped with a built-in programmable digital sight with the display of the distance to the target and display of angular values, which enables to fire other 60 mm rounds with a caliber compliant with the STANAG 4425 ed. 2 of any manufacturer under the condition that the propellant is limited to the permissible pressure value and the digital sight is reprogrammed to implemented compatible shooting tables.

Caliber	60.7 mm
Maximum range	min. 1300 m
Minimum range	max. 200 m
Rpm (rounds per minute)	25 rpm
Maximum number of rounds by continous fire	30 pcs
Work cycle	single-shot
Sight	digital
Weight	≤ 7.5 kg
Ammunition	dedicated 60mm MAPAM (SAAB) 60mm ammunition compatible with STANAG 4425.2
